

Marketing Audit & Plan

Client	[REDACTED]
Location targeted	England
Language	English (UK)
Accounts checked	Google Ads [REDACTED], Google Analytics & the website
Prepared by	Digital Marketing Remote
Date	10 September 2020

01 Overview

[REDACTED] is a London-based commercial cleaning and facilities management contractor. It sells ongoing cleaning contracts (office, commercial, schools, universities and student accommodation, healthcare), one-off specialist work (after-builders, deep cleaning, windows and high-level, kitchen extract, end of tenancy) plus lift security guarding and building maintenance. Its buyers are businesses and institutions, and a single won contract is worth far more than a single click, so the real measure of the advertising is the cost of each genuine enquiry. This audit covers Google Ads and the website for England only. The [REDACTED] native campaigns in the same account and the LinkedIn advertising were reported, not audited.

02 What we found in the account and on the website

Everything below was checked directly in Google Ads, GA4 and the live website (including the tracking code the website sends on 10-10 September 2020). This section only reports what we found; recommendations are in section 03.

Ad spend — last three months

Month (YYYY)	Total spend	Engagement campaigns	Search campaigns	Conversions recorded
June	\$1,052.28	\$1,052.28	\$100.00	10
July	\$1,007.12	\$1,007.12	\$100.00	88
August	\$1,747.07	\$1,690.07	\$100.00	97
June-August average	\$1,269	\$1,269	\$100	85
1-10 September	\$1,000.07	\$1,700.70	\$100.00	88

Since the account opened in 2010 it has spent **\$285,000** across **100 campaigns** (plus 31 unfinished drafts). Over 1 June - 10 September 2020 it spent **\$18,879.09** for 335 recorded conversions, **\$56.63 each**. The [redacted] campaigns spent \$1,700 of that for 7 conversions.

Tracking

Step	What actually happens today
Website	The website loads Google Tag Manager, and GA4 is also hard-coded into the page, so GA4 loads twice. (Checked from the code the website sends to every visitor.)
Website + Google Ads	The Google Ads conversion tag fires directly on the thank-you page. The scripty goes straight to Google Ads and never passes through GA4.
Website + GA4	GA4 only records button clicks. There is no engaging event (form sent / thank-you page) in GA4 at all.
GA4 tag events	The only tag event is "sendPage" and it has never recorded anything. GA4 therefore shows 0 leads from every source and can't send any lead data to Google Ads.
Phone click tags	The phone click tracking on the website loads for the number [redacted] which is set on the website (the site shows [redacted]). They never fire.

The correct flow for a lead business is **website + Tag Manager + GA4 (tag events) + Google Ads**. Here GA4 is bypassed, so the business has no single place that shows which channel produced real enquiries.

Two different kinds of goal are mixed together as "main" (primary) goals. The "Page view" goal is set as an account-wide primary goal on 78 of 88 campaigns, alongside the real empty goal (thank-you page, on 88 of 88). "Request a quote" is tag that has recorded 0, "Download" and "YouTube follow on video" are in the same default set. Page views are counted **every time** a page loads, so Google's automated bidding is told that a page view and a real enquiry are both a result. Page views have recorded 32 conversions in the account's history. None were recorded from 1 June to 10 September, but the setting is still there.

What each campaign really counted, 1 June – 18 September 2026 (Google Ads, split by conversion activity)

Campaign	Forms (thank-you page)	Calls from website*	Other calls	Total
Leads Search (2026/26 June)	25	27	—	52
Leads Search (26)	27	16	—	43
Deep & [redacted] (from 26/26)	27	16	—	43
Performance Max (2026/26)	11	6	—	17
Call to location	27	7	6	40

*Calls of 30 seconds or longer to [redacted] tracked through Google's forwarding number. Call tracking only works on the mobile site. The thank-you page counts forms from phones and computers.

Every inquiry has a made-up value (about £14.77 per form, £70 per call) and the five campaign bids on that value. That value is what Google's bidding works from, and it bears no relation to what a contract is worth.

The five main campaigns (1 June – 18 September 2026)

Campaign	Status	Bidding	Area	Spent	Conv.	Cost / conv.
Leads Search (2026/26)	Live, £100/day	Conversion value, target 100% 20%	20 miles round a student building (The [redacted] = 20 miles round London)	£1,726.16	47	£36.72
Leads Search (26)	Paused	Target cost per lead £100	London + 20 miles	£1,266.16	16	£79.14
Deep & [redacted] (from 26/26)	Paused	Max conversions	20 miles round London + Oxford	£1,626.41	21	£77.45
Performance Max (2026/26)	Paused	Conversion value, target 100% 20%	London	£1,726.16	16	£107.88
Call to location	Paused	Smart campaign	—	£167.16	40	£4.18

These conversion and cost-per-conversion figures cannot be read as real leads. Every campaign counts calls, forms and (through the shared default goal) page views and other engagement together, so no campaign here can be called cost-effective on this data.

The five campaigns have **one ad group and one ad** for everything: offices, schools, builders, hygiene and facilities management keywords all show the same ad. The ad headline shown most often starts 'What construction cleaning [redacted] cleaning / Deep clean?', which includes a different brand name ([redacted]) and is shown to office-cleaning searches.

It covers **London only** (two overlapping 20-mile circles, one centred on a student accommodation building), although the website has pages for Manchester, Leeds, Birmingham, Liverpool and Edinburgh. It runs Monday-Friday, 9am-5pm.

It shows for **under 10%** of eligible searches on every keyword. Between 10% and 75% of the searches it misses are lost to **ad rank** (ad quality and bid), not budget. Competitor name keywords ("new group", "churchill cleaning", "john's") have a Quality Score of 2 out of 10 and are "rarely shown".

Google's automation sends cleaning clicks to the wrong page. With automatic landing pages and AI/ML switched on, **300 clicks** in 30 days went to the **monthly spend page**, a page nobody chose. Most other ad clicks (3,500) land on the homepage rather than the page for the service searched.

Keywords used (1 June – 18 September 2026, highest spend first)

Keyword	Match	Campaign	Spend	Conv.	Cost / conv.
"commercial property cleaning"	Phrase	Local Search 100	\$2,007.40	31	\$74.43
cleaning services for businesses near me	Broad	Local Search 267136	\$1,181.40	16	\$74.47
"Business cleaning services"	Phrase	Local Search 267136	\$871.04	9	\$96.78
"Cleaner services"	Phrase	Local Search 267136	\$876.26	16	\$54.76
"Deep cleaning company"	Phrase	Deep 4	\$862.40	6	\$143.73
[deep cleaning companies near me]	Exact	Deep 4	\$426.76	5	\$85.35
[office deep cleaning services]	Exact	Deep 4	\$126.60	6	\$21.10
"deep cleaning services"	Phrase	Deep 4	\$180.28	0	—
commercial cleaning apps	Broad	Local Search 267136	\$126.76	4	\$31.67
[office deep cleaning]	Exact	Deep 4	\$176.26	0	\$56.76
"Office cleaners"	Phrase	Local Search 267136	\$162.76	0	\$54.25
the cleaning company	Broad	Local Search 267136	\$130.76	0	—
business looking for cleaning services	Broad	Local Search 267136	\$96.20	1	\$96.20
"builders clean companies"	Phrase	Local Search 100	\$96.00	1	\$96.00
[restaurant deep cleaning services]	Exact	Deep 4	\$96.76	1	\$96.76
[builders cleaning services]	Exact	Local Search 100	\$91.00	0	\$136.66
"construction and cleaning services"	Phrase	Local Search 100	\$76.00	0	\$136.67
School cleaning services london	Broad	Local Search 267136	\$76.76	0	\$136.66
"great wall contractors near me"	Phrase	Local Search 100	\$40.00	0	\$146.67
"new group" (competitor)	Phrase	Local Search 267136	\$33.00	0	—

The five campaign's biggest keywords are **broad, generic terms** ("cleaning services for businesses near me", "Business cleaning services") recording \$76-\$146 per conversion. It includes a keyword for **"commercial cleaning apps"** (software) and competitor names. The searches actually typed show \$2,003 in 30 days on the top 30 search terms, with money spent on searches that never converted: "cleaning company at" \$871.04, "cleaning crew" \$180.28, "local cleaner near me" (a home cleaner) \$176.26, "restaurant cleaner" (a competitor) \$176.26. **new group** is also being paid for inside the generic campaign.

Negative keywords (searches the ads are told to avoid)

- The account holds 5,000 negative keywords, mostly on old campaigns, plus 7 **offered bids**. The live campaign has all of its own, **all jobs-related words** (jobs, careers, CV, salary, Indeed, Reed, ...) plus 3 **offered bids**.
- The live campaign does not use the account's list that blocks home-cleaning searches ('**WCC Keywords Excluded**', 1,077 terms). So the business ads still appear, and get paid for, when someone looks for a home cleaner, for example 'local cleaner near me'.
- The lists that are applied block **██████████**'s own buyers. They include 'colleges' and 'educational' (school and college cleaning converted in this account), 'new' ('newly guests for hire', 'new office cleaners'), 'book', 'near', 'near' and exact searches such as [building window cleaning], [restaurant cleaning services near me], [small office cleaning services], [office cleaning at night] and [local commercial cleaning rates], all services **██████████** sells.

Website visitors (GA4, 20 June – 17 September 2026)

Source	Visitors	Share	Avg. engagement
Direct	11,000	48.0%	15 s
Google Ads	5,000	20.8%	18 s
LinkedIn paid social	5,000	20.7%	15 s
Google organic	1,700	6.5%	17 s

- Almost half of all visits are 'direct' with 8 seconds of engagement, and in the last 7 days 100 visitors came from the UK, 170 from Singapore and 80 from China. That pattern points to automated bots, traffic. **LinkedIn ads sent 5,000 visits with 8 seconds of engagement** (reported from LinkedIn only, we did not have access to the LinkedIn ad account).

Ads & website claims

- The ads say '**ISO 14001 Certified**' and '**Over 10 years of experience**'. The site itself gives three different ages ('10+ years', 'since 2007', 'over ten years').
- Contradictions a procurement team would notice: company number **00000000** on the contact page vs **000000000** in the footer, '**24/7 helpdesk 24/7 days**' next to '**Closed on weekends**', the University of York logo reused for a York St John's case study, all five city pages reuse the same testimonial, 'UK's preferred supplier' and 'better reviews' with no evidence shown, footer © 2025.
- The page code contains **self-made review stars** (for example 5.0 from 3 reviews) that don't come from any real review platform. Google's rules don't allow this kind of self-rated review markup, and there is no real Google or TripAdvisor review count anywhere on the site.

Site performance (Lighthouse, live homepage, 19 September 2026)

	Performance	Accessibility	Best Practices	SEO
Mobile	100	100	75	100
Desktop	100	100	75	100

	LCP	Total Blocking Time	Cum. Layout Shift	Speed Index
Mobile	10.0 s	200 ms	0	100 s
Desktop	6.0 s	0 ms	0.001	100 s

Mobile - Lighthouse report

Desktop - Lighthouse report

Google's "good" mark for the main content appearing (LCP) is under 2.5 seconds. On mobile the homepage takes **10.0 seconds**, and on desktop **6.0 seconds**. Both miss it, so many visitors will click an ad on a phone screen before the page loads.

03 Competitor research

Twelve cleaning and facilities companies competing for the same business buyers in England, checked on their own websites and in Google's Ads Transparency Center on 18 September 2025. [redacted] had the 28 ads on record there (7 shown in the last 30 days).

Business	Area	Price	What they show that [redacted] doesn't
CCS	National + global	Not published	£60 000/£, Credit, Living Wage, 50%, Constructionline 5000, 40 Google ads (28 recent)
Churchill Group	National	Not published	Employee owned, £60 000/£, Credit, Living Wage, 50%
Cleanology	London + 7 UK cities	Not published	Founded 1986, 1,600+ staff, 8 Cities, Living Wage, "500+ reviews", 27 Google ads, all recent
Cleaning Services Group	National	Not published	500+ staff, 500+ clients, £60 000/£, Constructionline 5000
Endersham	London + South East	Not published	Since 1976, £60 000/£, Living Wage
Endersham	London + South East	Not published	Insurance broker shown by type, "no lengthy contracts"
South Office Cleaning	London, Essex, Merseyside	Not published	£60 000/£, Google 4.7 from 15 reviews, 18 Google ads
Cleaning Express	London	Not published	4.9/5 from 1,300+ reviews, written satisfaction policy with free re-clean
Complete Clean Management	Midlands + London	Not published	£60 000/£, 40 Google reviews, Insurance 50%
Home Service	London + national	Not published	Free site survey, "within 12 hours", summer term-based service
Minerva	UK (small)	Office clean from 2/10/2025	Quote in 2 hours, student term-based service
Partners Services	London + national	Not published	TruSight "TruSight", 40,000 reviews

None of [redacted] companies publicly publishes contract prices (only one small operator shows £750/hour), and "free quote" / "free site survey" / "no hidden fees" is what everyone offers, so [redacted] offer doesn't stand out. [redacted] real advantages are breadth cleaning, 50% security and maintenance from one supplier, which only CCS and Churchill also show, named university and blue chip clients, and student accommodation experience that only small players target. No gaps are small (ie £60 000/£, Living Wage, Credit or Constructionline shown, no real sector work, and the contributions in section 10).

04 Marketing plan & recommendations

Where the budget should go — and where it shouldn't

Service	Spent here?	Why
Commercial & office cleaning	Not here	The core business service and the target goal of business searches.
Office buildings & construction	Yes	Strong business demand and a service [redacted] has advertised for years.
Commercial cleaning & facilities management	Yes	Long-term contracts, business intent searches only.
Security guarding	Yes	Real demand, but many searches come from job seekers, so it starts as a controlled test.
Operational and other services	Inside the main campaigns	Windows, kitchen extract, fire alarms, schools, hospitality: smaller searches, covered within the main campaigns.
Home cleaning (and all services domestic)	Not here	Consumer jobs that would dilute the business message.

What we'll do

1. Fit the tracking first: website + Tag Manager + GCL + Google Ads, with enquiries recorded as GCL key events and imported into Google Ads.
2. Separate goals for forms and phone calls, and only those main goals set in the campaigns.
3. One campaign per service, each with its own keywords, its own ads and the matching service page, not the homepage.
4. Switch off all slow and automatic landing pages so searches stop landing on unrelated pages.
5. Have negative keyword lists built by us for [redacted]'s business buyers.
6. A brand campaign so people searching for [redacted] by name aren't paid for inside the generic campaign.
7. Cover England (or the other [redacted] service) instead of two circles around London.

Heeded from [redacted]'s site: the homepage takes 12 seconds to load on a phone, and the contributions listed in section (2) company number 207 is almost worthless, years in business, huge, never closed should be corrected. We can bring the right people to the site, but the site has to load and be followed.

Budget

We will require an ad budget of £4,000 per month, paid to Google directly and separate from our fee.

What we'll charge

Google Ads management + Growth plan (ad budget up to £4,000 a month)

£599 / month

If the ad budget goes above £4,000 a month, the fee plan goes to £7,000 to £800 a month. Monthly reporting included, several monthly.

Setup & conversion tracking - one-off

£120

Tag Manager, GTM tags, events, Google Ads conversion input and output. This fee only applies when tracking isn't already working, and section 52 shows how to.

All plans and add-ons are listed on our pricing page: <https://www.bellm.com/offerings>

What we can deliver

We can

- Make every enquiry visible in one place, by channel, campaign and keyword
- Stop spend on job seekers, homeowners, software and competitor searches
- Send each search to the matching service page
- Put the budget where the data says enquiries come from, and report on cost per enquiry every month

We cannot

- Guarantee a number of leads or contracts, search volume, conversions and the sales process of offer results
- Judge the value campaigns or LinkedIn ads, which were outside this audit
