

Marketing Audit & Plan

Client	[REDACTED] - [REDACTED]
Location targeted	Central London - [REDACTED] (Notting Dale, Regent's Park, Primrose, Covent Garden, South Kensington Square, etc) (all within walk)
Language	English (UK)
Prepared by	Digital Marketing Remote
Date	1 September 2020

01 Overview

[REDACTED] is a one-man clinic based at [REDACTED] London, run by [REDACTED] himself -- no team, no other practitioners. His specialty is myofascial release combined with manual therapy and postural correction, aimed at pain relief, sports injury recovery, and desk-related posture problems. The business runs on two offers: a 20-minute assessment, priced at £75 but currently given away free as the way in, and the real product -- a 2-hour treatment session at £150 an hour, so £300 a visit. Because it's one person doing hands-on work, there's a hard ceiling on how many patients he can see in a day, which caps how much the business can make no matter how many leads come in.

02 What we found in the account and on the website

Everything below is what we found, checked directly in the Meta Ads account, Meta Events Manager, and the live website on 2 September 2025. No recommendations in this section – those come later.

Tracking

The Meta Pixel on [REDACTED] has **PageView only**. No Lead event, no booking event, nothing else is set up on the site itself.

The same Meta Pixel is also installed inside **Caterally's own settings** – that's the only reason any booking signal exists at all, since there's no booking form embedded on the website. Real events we found firing from Caterally over the last 28 days: `booking_request_sent` (1), `booking_event_page_page` (1), `booking_request_time` (1), `booking_meeting_scheduled` (1).

Zero Custom Conversions are set up. That one real booking event that does fire has never been turned into something a campaign can actually use.

No Conversions API connection. No UTM parameters anywhere on the Caterally link, on any page.

We could not verify whether the Caterally booking confirmation redirects anywhere (a thank you page, etc.). There's no admin access to [REDACTED]'s Caterally account from our side, and we did not complete a live test booking to check, since that would create a real appointment on the calendar.

Campaigns & ad spend

Two campaigns have ever run on this account. Total spend, lifetime: **\$425.75**.

[REDACTED] **Traffic_Aug25** – objective set to Maximize number of landing page views, 1,007 landing page views, \$226.28 spent, \$0.23 per landing page view.

[REDACTED] **Funnel Leads Campaign \$728 (paused)** – objective set to Retain View Content, \$727.88 spent, and **zero View Content events were ever recorded** – that event never fires on the site, so this campaign spent money against a goal it could never register.

As of the time of this audit (2 Sep 2025, afternoon), **both campaigns show as OFF** in the account. They were showing active earlier the same day.

Neither campaign, at any point, has been set up to optimize toward an actual booking.

Ads

Our ads are currently in the active ad set (called *Pain*), covering three creative angles – *Wrist/Injury*, *Desk Worker*, *Pain* – each with an A and B video version.

Ad name	Angle	Landing page views	Cost / LPV	Spend
<i>Injury_A</i>	<i>Wrist / sports injury</i>	488	£0.26	£125.28
<i>Desk_B</i>	<i>Desk worker</i>	279	£0.28	£82.92
<i>Pain_A</i>	<i>Pain</i>	76	£0.26	£19.56
<i>Injury_B</i>	<i>Wrist / sports injury</i>	76	£0.26	£19.56
<i>Pain_B</i>	<i>Pain</i>	27	£0.27	£6.93
<i>Desk_A</i>	<i>Desk worker</i>	36	£0.26	£9.36

All six ads use **the exact same primary text and headline** – “Still living with pain that won’t go away?... Pain-Free Starts With One Assessment” – regardless of which video is attached. Only the video changes between ads, the written message doesn’t.

Confirmed: 4 of the 6 active ads end on a dead link.

The video and card on *Injury_A*, *Injury_B*, *Desk_A*, and *Desk_B* shows the web address **Free assessment**. That page returns a 404 – it does not exist. *Pain_A* and *Pain_B* end on **Free assessment**, which does work.

Checked by putting the actual web-card frame from each of the six live ad videos and cross-checking the URL against the live site.

One ad carries a minor delivery flag: “Your ad won’t deliver to 1 placement – Facebook right column.” That placement only accepts static images, not video, which is why it’s flagged. Low-traffic placement, minor.

Targeting

Advantage+ audience is switched off. This is running on fully manual, hand-picked targeting – not an algorithm suggestion.

Locations: King’s Cross, Grosvenor Square, Mayfair, W1 London, **Salisbury**, **Salisbury**, plus Florida, Covent Garden, and South Kensington. Age 24–55, all genders. No custom audiences.

Interest targeting is **100% fitness and athletic**: Hurdleball, CrossFit, Pilates, Running club, Triathlon, Bodybuilding, Weight training, Human Traction, Olympic weightlifting, and similar. There is no interest targeting related to chronic pain, posture, desk jobs, or general physiotherapy matters – even though the Pain and Desk Worker videos are aimed at exactly those people.

Meta’s own estimate for this audience is 548,000–644,000 people. Lifetime reach across the account’s entire history is 22,688 – about 3.7% of the estimate.

Ad set budget: £20/day, £20 maximum daily spend, £400 maximum weekly spend.

Age breakdown (last 30 days, active campaign)

Age group	Landing page views	Reach	Cost / LPV	Spend
18-24	20	750	\$5.25	\$10.50
25-34	270	9,000	\$5.55	\$15.00
35-44	240	8,000	\$5.20	\$12.48
45-54	490	16,170	\$5.21	\$25.67
55-64	140	700	\$5.14	\$7.20

The 45-54 age group drives 47% of all results at close to the best cost of any age band.

Website

The live homepage [redacted] sells only the \$75 assessment. **There is no mention anywhere on it of the \$1000/year treatment** – the thing the business actually needs to sell. We checked the homepage, the old home page, and the services page – the price does not appear on any of them.

The homepage has a second button, "Explore Full Website," which leads to a different, much fuller version of the site [redacted] old home) with a full navigation menu – Services, About, Insights, Support.

That fuller site still describes the business as operating in multiple international locations – its hero text reads "Precision care, wherever you are – London, St. Moritz, Lisbon, Warsaw, Dubai, and Beyond!" and its Locations menu lists London, Lisbon, and "International Clinics." Those clinics are closed now – this is old copy that was never taken down, still live on a page the homepage actively links to.

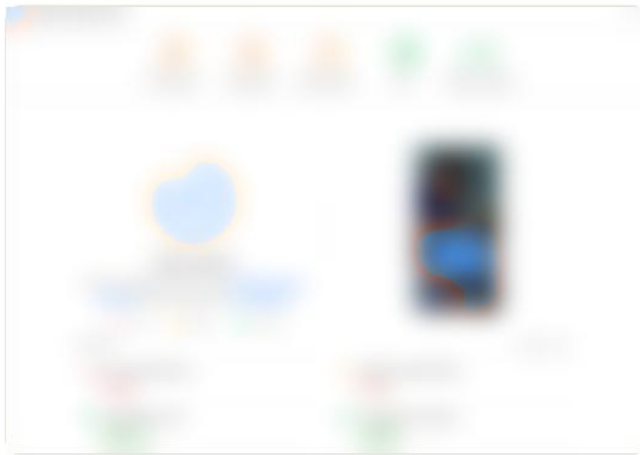

A copy typo was found on the old home page: "restoration of the vestibular system matrix" under the Myofascial Release description.

The live homepage carries 11 five-star client testimonials.

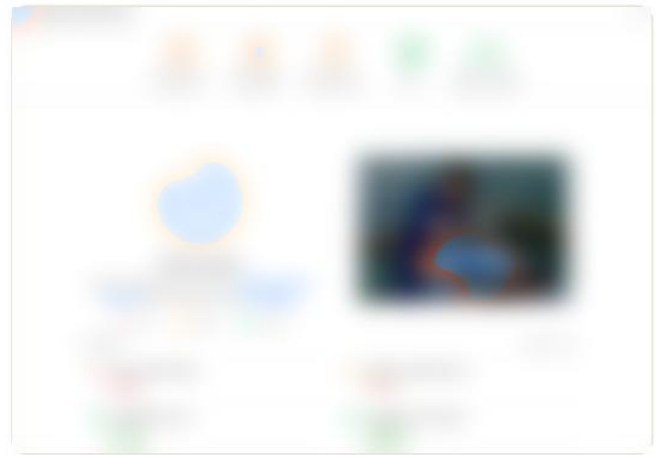

Site performance (Lighthouse, live homepage)

	Performance	Accessibility	Best Practices	SEO
Mobile	92	97	100	98
Desktop	91	98	100	98

	LCP	Total Blocking Time	Cum. Layout Shift	Speed Index
Mobile	2.7s	60ms	0.080	6.7s
Desktop	1.7s	3ms	0.000	3.8s

Mobile - Lighthouse report

Desktop - Lighthouse report

Mobile Speed Index (25.3s) is noticeably slower than desktop (2.3s) - how long the page takes to look visually complete is a matter. Everything else scores similarly across both.

03 Competitor research

Five comparable practices within roughly a mile of [redacted] checked directly on each business's own website:

Business	Price	Free assessment?	What they claim that [redacted] doesn't
Dr. Physics, Phoenix	Not published	No	20hr physics, home visits
[redacted] Physiotherapy	Not published	No	Therapist team physics, on-site diagnostics, physiotherapy/ergonomics, insurance accepted, 20hr initial visit + gym
One Body LLC (San Francisco)	\$100-120	No	ACCP registered, same day/urgent appointments, 1200 / 1000hr services
The Spine Touch, Mayfair	\$170 (90 min)	No	Home visits, injection add-ons
Movement Performance, Westborough	\$120 (60 min) / \$150 (90 min)	No	10-session block discounts
Elite Physiotherapy, Phoenix	\$120 (90 min)	No	ACCP + CDP registered, insurance, bank holiday appointments
Health & Performance Studio, [redacted]	\$120 initial	No	Closest format match = multi-practitioner training + therapy studio
Third Space, Soho	\$180 (90 min) - same as [redacted]	No	Injection add-ons, 8 physics team
JP Physics, Westborough	\$170	No	Dr. Charles FC physics, Teller tested, gym-based rehab, insurance
Portland Physiotherapy, Phoenix	Not published	No	Surgeon relationships, on-site gym/track

Pricing: \$120/90min is mid-market. It matches Third Space almost exactly, undercuts Spine Touch and JP Physics by \$10-20/90min, and sits above One Body LLC and Movement Performance. Not cheap, not expensive.

Free assessment: only 1 of the 10 One Body LLC, a multi-site chain, offers this. None in this market, but not unique.

What [redacted] has that most of these don't: almost 1-to-1 with the practitioner format? = most competitors are multi-physicist teams where you don't know who you'll get.

What [redacted] is offering that most of these have: any instant credential (ACCP/CDP), any insurance acceptance, any same-day appointments slots.

04 Keyword research

Pulled directly from Google Ads Keyword Planner, London-wide, English, Aug 2025 – Jul 2026.

Note: Google removed "physiotherapy", "physiotherapy", "physio near me", "back pain treatment", and "private physiotherapy" from this search before generating results – a known Google Ads restriction on regulated health service terms. Only "massage/physiotherapy" terms came through.

#	Keyword	Avg. monthly searches	Bid range	Competition
1	sports massage london	1,200	£1.27-£2.72	High
2	myofascial release	1,200	£0.97-£2.96	Low
3	myofascial release	1,200	£0.97-£2.96	Low
4	muscle fascia release	1,200	£0.97-£2.96	Low
5	myofascial muscle release	1,200	£0.97-£2.96	Low
6	fascia release	1,200	£0.97-£2.96	Medium
7	fascia myofascial release	1,200	£0.97-£2.96	Medium
8	fascia massage	300	£0.97-£2.97	High
9	myofascial	300	76.34k-99k	Low
10	myofascial release near me	250	£0.76-£2.96	Medium
11	myofascial massage near me	250	£0.76-£2.96	Medium
12	myofascial therapist near me	250	£0.76-£2.96	Medium
13	myofascial treatment near me	250	£0.76-£2.96	Medium
14	myofascial massage	150	£0.75-£2.77	Medium
15	fascia release massage	150	£0.88-£2.26	Medium

Rows 2-8 and 9-7 show identical numbers – Google groups these variants under one shared estimate. Real distinct demand for the "myofascial release" phrase family is closer to ~1,200 combined, not 6,000. We also removed "fascia release" and "myofascial release" from this list – both appeared bundled at 1,200/mo in the same cluster, but they're imprecise, not real demand for this service.

05 Marketing plan & recommendations

What we'll do

- Build a Custom Conversion from the real booking event (`booked_meeting_scheduled`), so we finally have an honest signal to optimize toward instead of clicks.
- We don't touch the two existing campaigns — they stay exactly as they are, on or off, as account history. Nothing gets edited and nothing gets deleted.
- We launch a brand new campaign, built from scratch, with its goal set to that real Custom Conversion from day one.
- New campaign structure: one ad set per creative angle (Injury, Desk Worker, Pain), each matched to its own audience — keep the current Broad/affinity interest list for Injury, and build separate non-affinity audiences for Pain and Desk Worker. Right now those two videos are running against an audience that was never built for them.
- Maximum 2 ads per ad set — the existing full post for each angle. Nothing overhauled.
- Meta only, to start. Once we have real numbers back, Google Search and YouTube are both worth adding if [redacted] wants to expand — Search in particular shows some real potential from what we found — but we're not starting there.
- If the Facebook-based funnel doesn't hit booking numbers within the test period, we move to a Meta Instant Form as the primary path instead: the person fills a short form on Facebook/Instagram, and [redacted] calls them directly to book the appointment himself. This keeps the human in the loop earlier and may convert better than asking a cold visitor to convert to a calendar slot straight away.

The website landing page needs updating before this can work properly. Based on what we found, the desk/pain assessment link needs fixing or removing from four ad sets, and the 47000hour treatment needs to actually appear somewhere on the site the ad point to, and the "Optimize Full Release" page needs to drop the old `LabradfordMeredith` copy — those clicks are skewed, but the page describing them is still live and still linked from the homepage.

The capacity math

4 treatments a day, 4 assessments a day — 16 hours a day, 4 days a week. That's the realistic ceiling for one practitioner doing hands-on work.

4 treatments × \$200 × 4 days = **32,000/week** → = **\$128,000/month** revenue ceiling. Assessments are free, so they don't add direct revenue — they're the lead-gen step.

If the target is \$150,000/month profit, everything else — ad spend, management fee, and [redacted]'s own overhead — has to fit inside roughly 35,000/month. To actually clear \$150,000, the schedule needs to run at **90%+ of full capacity**, consistently. That's a hard ceiling, and it's not something media spend can force on its own — it depends on how many booked slots actually show up and convert into treatment. **We are not claiming or promising this number.** It's here so the target is understood for what it is, not treated as a given.

Budget — two options

	Daily spend	# of ads	Coverage
Option A	\$100/day	2	Two of the three creative angles
Option B	\$100/day	3	All three angles, all six ads

Either way, max 2 ads per ad set. This is all spend paid directly to Meta — separate from our management fee.

What we'll charge

Management fee:

£300/month

This is the package that matches the budget range on this page. We price by ad spend too – see the full fee here:

[advertisingcosts.com/fees/](#)

If more creative variety is needed

We can produce 10 AI-generated ad images, each in 2 size variations, for \$200 – a one-off add-on, separate from the monthly fee, for whenever the current creative set needs refreshing.

What we can deliver

We can:

- Give you working conversion tracking and funnel cost per booking numbers – right now there are none.
- Match each creative to an audience that actually fits it, using assets you already have.
- Keep full account history intact – nothing edited, nothing deleted – while running a clean new campaign properly set up from the start.
- Improve the efficiency of the current spend, since 100% of it today is unmeasured against real outcomes.

We cannot:

- Promise a fully booked calendar. That needs roughly 80%+ use of a hard capacity ceiling that no amount of media spend can change – more leads doesn't mean more hours in the day.
- Promise large volume from Search on the hypothetical specific terms – real demand there is needed, and it's not where we're starting regardless.
- Fix the site's own pricing and content gaps ourselves – that's a change needed on the client's side before the funnel can convert properly.
